

Quick reference: Operating instructions

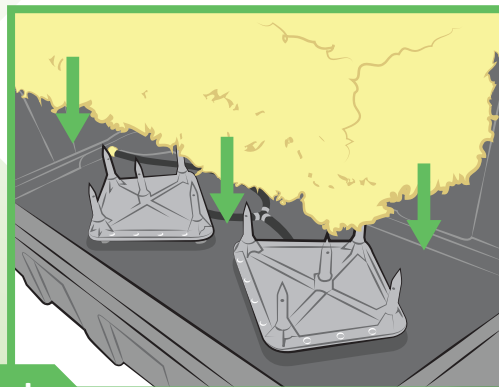

1.

Fill

Use funnel and watering can provided to fill Steam Generator until water is visible in Filler Spout.

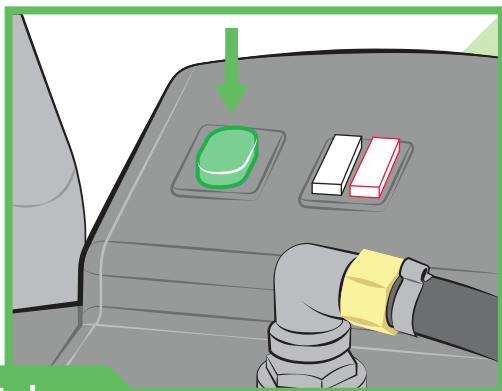

2.

Load

Place bale or loose hay over Steam Manifolds and **push down firmly** so Manifold Spikes pierce hay to their full length. Lower Lid and fasten Catches.

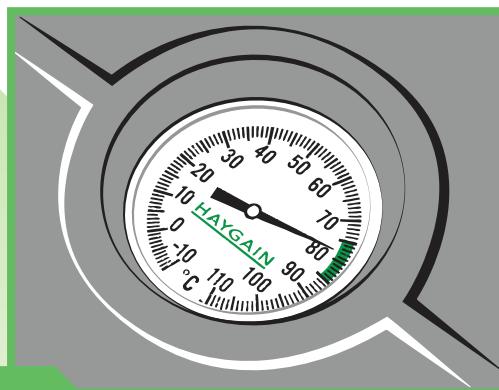

3.

Switch on

Push down green On/Off Button located on top of Steam Generator.

4.

Steam

Allow hay to steam for **at least 50 minutes** and Lid Thermometer reads in green band **above 80° centigrade** for at least 5 minutes.

Consecutive steam cycles should be for at least 35 minutes.

5.

Unload

Switch 'off' by pressing green On/Off Button. Undo Catches and open Hay Chest Lid. **Caution steam is hot.** Remove hay and feed immediately or within 24 hours.

Quick reference: Maintenance

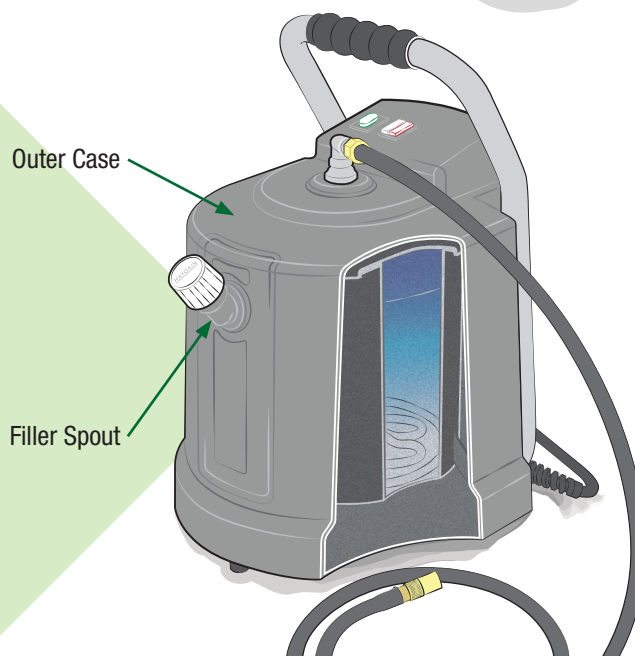

Hay Chest

- Remove any loose hay and clear Drain Hole in base of Hay Chest after use.
- Wash out once a week ensuring space under Steam Manifolds is cleaned.
- Keep Manifold Holes clear of obstructions.
- Keep area under and around HAYGAIN® swept and disinfected regularly.

PB Steam Generator

- Empty residual water out of Filler Spout after use.
- Rinse out with fresh water every few days and check for limescale.
- Descale at least every 6 weeks (refer to User Manual). Flush out with clean water after descaling. Do not use caustic cleaners; we recommend you use Propress Equine Descaler which can be purchased online or from our Customer Helpline.
- Keep Steam Generator clean by regularly wiping Outer Case with damp cloth.

Refer to the HG1000 User Manual for more detailed instructions or call our helpline:
