What are the **infection hotspots** in your yard?

Disinfect to Protect!

Germs are invisible to the naked eye but are everywhere!

What threat do other animals and cross-species infection pose to our horses?

Pathogens or infectious agents (whether fungi, bacteria or viruses) are just waiting for the opportunity to cross over into a horse.

Salmonellosis is a bacterial disease which causes acute or chronic diarrhoea in horses. All birds and rodents can be carriers and faecal contamination can lead to infection.

Protek's Envirocair Veterinary works for up to **14 days** on hard surfaces and is safe to use on feed and watering utensils.

Sterilise surfaces using the convenient Hand & Surface Wipes or Ready to Use solution.

Did you know an inanimate object that passes on a disease is called a fomite?

Ringworm (Dermatophytosis) is a common and highly contagious fungal skin infection that affects animals and humans.

Fomites for Ringworm can be grooming brushes, blankets, tack, feed mangers, horseboxes, horsewalkers, fence posts, stable doors, etc. Fungal spores can live in wood for 10 years and are easily overlooked.

The non-corrosive, food safe and biodegradable properties of Envirocair Veterinary make it safe to use whilst animals and humans are present.

Sterilise large spaces with the Fogger and equipment using the Trigger Spray.

Are you a mode of transmission?

Pathogens can be transferred via direct human contact and visitors to your yard are potential carriers of infection, e.g. Staff, Owners, Farriers and Vets.

Equine Herpes Virus (EHV) is a highly infectious strain of the herpes virus that affects the respiratory system, particularly in young horses. Viruses are present in nasal secretions which cling to hands, clothes and shoes.

Strategically placed Hand Gel should be used by everyone coming into the yard and between the handling of every horse.

Use the Concentrate Solution to make a disinfectant foot bath.

PROTEK+

EnviroCair Veterinary

Proven longevity of up to 14 days

Kills 99.999% of pathogens

No risk to animals and humans

DEFRA* approved

Disinfect to eradicate pathogens and prevent infection

Are you overlooking the importance of good stable hygiene?

Prevention is better than cure. Once inside a yard, infectious diseases spread rapidly between horses and strict hygiene becomes essential in controlling the spread of disease.

Strangles is a highly contagious bacterial infection of the lymph nodes around the throat; causing swelling, respiratory obstruction and abscesses. Bacteria can survive for up to 8 weeks on equipment and in wood and for at least 4 weeks in water troughs.

Envirocair Veterinary kills **99.999%** of viruses, bacteria, fungi, moulds and spores.

Use as part of your stable management and hygiene routine, to ensure a healthy environment for you, your horse and livestock.

PROTEK

your horse from harmful pathogens...

Protek's Envirocair Veterinary is a **revolutionary disinfectant** that has been proven to outperform existing competitor products. Other disinfectants cease to work once dry, **Envirocair Veterinary** continues to **work for up to 14 days**.

Developed for veterinary hospitals and surgeries, equestrian establishments, agricultural use, kennels, livestock sales, poultry farms, animal welfare sanctuaries, in fact anywhere that animal infection is a risk.

Envirocair Veterinary kills pathogens

responsible for diseases, some of these include: Foot and Mouth, Strangles, Equine influenza, Avian bird flu, Ringworm, Animal and human MRSA, Equine Herpes, TB, Mud rash bacteria, Rotavirus, EVA, Campylobacter, Distemper, Leptospirosis, Parvovirus, Rabies, Aspergillus Niger, African sleeping sickness, E.Coli, Salmonella, Influenza, Swine flu, Newcastle disease, etc.

* This disinfectant has been approved for disinfection where an approved product is required to be used under the control legislation for the following specific disease Orders; Foot-and-mouth disease at the dilution rate of one part of this preparation plus 20 parts of water. This disinfectant has also been approved for disinfection at a dilution of 1 part of this preparation plus 12 parts water where disease control legislation requires the use of an approved disinfectant, but this approval does not apply to disinfection required under specific disease legislation relating to Swine Vesicular disease, Tuberculosis disease or Diseases of Poultry (Newcastle disease and Avian influenza). This approval is granted under the Diseases of Animals (Approved Disinfectants) Orders by the Secretary of State for Environment, Food and Rural Affairs in England, Scotland and Wales. For confirmation of continuing approval refer to the Defra list of approved disinfectants at <http://disinfectants.defra.gov.uk>. The contents of our concentrated product are guaranteed by the manufacturer to be of the same composition and quality as the sample submitted for approval testing.
